

Pacific Giant Summer Skies Larkspur
Delphinium 'Summer Skies'

Plant Height: 4 feet

Flower Height: 6 feet

Spread: 18 inches

Spacing: 12 inches

Sunlight: ☉ ●

Hardiness Zone: 3a

Other Names: Candle Larkspur, Pacific Hybrid Larkspur

Group/Class: Pacific Giant Series

Description:

A beautiful blend of blues and whites, this variety features tall stems covered in brightly colored flowers, rising above low mounds of green foliage; excellent choice for beds or borders; stunning grouped in fresh-cut arrangements

Ornamental Features

Pacific Giant Summer Skies Larkspur features bold spikes of powder blue flowers with white eyes rising above the foliage from early to mid summer. The flowers are excellent for cutting. Its deeply cut lobed leaves remain dark green in colour throughout the season.

Landscape Attributes

Pacific Giant Summer Skies Larkspur is an herbaceous perennial with a rigidly upright and towering form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Pacific Giant Summer Skies Larkspur is recommended for the following landscape applications;

- Vertical Accent
- Mass Planting
- General Garden Use

Planting & Growing

Pacific Giant Summer Skies Larkspur will grow to be about 4 feet tall at maturity extending to 6 feet tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
