

**Chocoholic Bugbane***Cimicifuga racemosa 'Chocoholic'*

Plant Height: 24 inches

Flower Height: 4 feet

Spread: 3 feet

Sunlight:  

Hardiness Zone: 4a

Other Names: Black Snakeroot, Black Cohosh, *Actaea racemosa*

**Description:**

Beautiful chocolate-purple, fragrant foliage and long, airy upright spikes of white flowers; prefers moist, but well-drained soil; use this plant primarily for its wonderful contrasting leaves

**Ornamental Features**

Chocoholic Bugbane is blanketed in stunning spikes of fragrant white flowers with shell pink overtones rising above the foliage from mid to late summer. The flowers are excellent for cutting. Its attractive deeply cut compound leaves emerge deep purple in spring, turning dark gray in colour with distinctive black veins throughout the season. The brown fruits are carried on spikes from late summer to late winter. The dark red stems are very colorful and add to the overall interest of the plant.

**Landscape Attributes**

Chocoholic Bugbane is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting birds and bees to your yard. It has no significant negative characteristics.

Chocoholic Bugbane is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

### **Planting & Growing**

Chocoholic Bugbane will grow to be about 24 inches tall at maturity extending to 4 feet tall with the flowers, with a spread of 3 feet. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 15 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selection of a native North American species, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
