

**Zagreb Tickseed***Coreopsis verticillata 'Zagreb'*

Height: 15 inches

Spread: 15 inches

Sunlight: ☉

Hardiness Zone: 5a

Other Names: Threadleaf Coreopsis

Description:

A stunning mounded and drought tolerant variety that features fine, ferny foliage covered in cheerful, yellow flowers; blooms from early to late summer; an excellent addition to beds, borders or containers; thrives in poor, sandy soils

Ornamental Features

Zagreb Tickseed is smothered in stunning gold daisy flowers at the ends of the stems from early to late summer. The flowers are excellent for cutting. Its ferny leaves remain emerald green in colour throughout the season.

Landscape Attributes

Zagreb Tickseed is an open herbaceous perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Zagreb Tickseed is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Zagreb Tickseed will grow to be about 12 inches tall at maturity, with a spread of 15 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 15 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in poor soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
