

Pamina Anemone

Anemone hupehensis 'Pamina'

Height: 3 feet

Spread: 30 inches

Sunlight: ☉ ●

Hardiness Zone: 5a

Other Names: Japanese Anemone, Windflower

Description:

An outstanding selection for the mid to late summer garden; branching stems of rose pink flowers with yellow centers are great for cutting; good for a partial shade area; may need mulch in colder winter areas; beautiful when massed or in containers

Ornamental Features

Pamina Anemone has masses of beautiful rose buttercup flowers with yellow eyes at the ends of the stems from late summer to early fall, which are most effective when planted in groupings. Its lobed leaves remain dark green in colour throughout the season.

Landscape Attributes

Pamina Anemone is a dense herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Pamina Anemone is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Pamina Anemone will grow to be about 30 inches tall at maturity, with a spread of 30 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
