

**Wheels of Wonder™ Violet Wonder Ice Plant*****Delosperma 'WOWDRW5'***

Plant Height: 6 inches

Flower Height: 8 inches

Spread: 24 inches

Spacing: 14 inches

Sunlight: ☉

Hardiness Zone: 5a

Group/Class: Wheels of Wonder Series

**Description:**

A low growing succulent, native to South Africa but amazingly hardy in North America; dazzling violet daisy-like flowers with white centers; green foliage has burgundy overtones in fall; perfect for xeriscapes, rock gardens, screens and sandy soils

**Ornamental Features**

Wheels of Wonder Violet Wonder Ice Plant features showy violet daisy flowers with yellow eyes and white centers rising above the foliage from early to late summer. Its attractive small succulent narrow leaves are green in colour. As an added bonus, the foliage turns a gorgeous burgundy in the fall.

**Landscape Attributes**

Wheels of Wonder Violet Wonder Ice Plant is an herbaceous evergreen perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Wheels of Wonder Violet Wonder Ice Plant is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

### **Planting & Growing**

Wheels of Wonder Violet Wonder Ice Plant will grow to be only 6 inches tall at maturity extending to 8 inches tall with the flowers, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
