

Calamint

Calamintha nepeta ssp. nepeta

Plant Height: 8 inches

Flower Height: 12 inches

Spread: 18 inches

Spacing: 18 inches

Sunlight: ☉ ●

Hardiness Zone: 4a

Description:

Pretty lilac to white flowers cover this more vigorous variety throughout summer; features larger flower clusters, and larger foliage than the species; an excellent choice for borders and containers; dried leaves used for potpourris or sachets

Ornamental Features

Calamint features dainty spikes of lilac purple trumpet-shaped flowers with white overtones rising above the foliage from mid summer to early fall. Its fragrant oval leaves remain green in colour throughout the season.

Landscape Attributes

Calamint is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering
- Self-Seeding

Calamint is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Herb Gardens

Planting & Growing

Calamint will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America..
