

**Fragrant Water Lily**  
*Nymphaea odorata*

Plant Height: 3 inches

Flower Height: 6 inches

Spread: 6 feet

Sunlight: ☉ ●

Hardiness Zone: 2b

Other Names: Waterlily

**Description:**

Large, fragrant, white star-shaped flowers with golden centers; bright green leaves with purplish-red undersides; a beautiful addition to your pond; easy to care for; water lilies dislike moving water

**Ornamental Features**

Fragrant Water Lily features showy fragrant semi-double white star-shaped flowers with gold eyes at the ends of the stems from early to late summer. Its attractive large glossy round leaves remain green in colour with curious burgundy undersides throughout the year.

**Landscape Attributes**

Fragrant Water Lily is an herbaceous evergreen perennial with a low habit of growth, spreading atop the surface of the water. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It has no significant negative characteristics.

Fragrant Water Lily is ideally suited for growing in a pond, water garden or patio water container, and is recommended for the following landscape applications;

- Water Gardens
- Naturalizing And Woodland Gardens
- Bog Gardens

### **Planting & Growing**

Fragrant Water Lily will grow to be only 3 inches tall at maturity extending to 6 inches tall with the flowers, with a spread of 6 feet. Its foliage tends to remain low and dense right to the water. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. As an aquatic plant, it requires a suitable water garden environment and will benefit from special planting and ongoing care practices; consult one of our in-store experts for further details and instructions. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America. It can be propagated by division.
