**Description:**

Mounds of narrow, dark green foliage are covered with pink daisy-like flowers, adding a pop of color to autumn days; dwarf compact habit, ideal for patio containers, borders or garden beds; beautiful added to fresh cut arrangements; low maintenance

**Ornamental Features**

Woods Pink Aster has masses of beautiful pink daisy flowers with yellow eyes at the ends of the stems from late summer to mid fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves remain dark green in colour throughout the season.

**Landscape Attributes**

Woods Pink Aster is a dense herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Woods Pink Aster is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

### **Planting & Growing**

Woods Pink Aster will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 18 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
