

**White Clips Bellflower***Campanula carpatica 'White Clips'*

Plant Height: 8 inches

Flower Height: 12 inches

Spread: 12 inches

Sunlight:  

Hardiness Zone: 3a

Other Names: Carpathian Harebell, Carpathian Bellflower

Description:

Beautiful in borders and beds, this low growing, mounded selection presents bright white, bell-shaped flowers with green foliage; fast growing, blooming through the summer months; excellent in rock gardens and patio containers; deadhead regularly

Ornamental Features

White Clips Bellflower is smothered in stunning white bell-shaped flowers at the ends of the stems from early summer to early fall. Its round leaves remain green in colour throughout the season.

Landscape Attributes

White Clips Bellflower is a dense herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

White Clips Bellflower is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use

Planting & Growing

White Clips Bellflower will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 12 inches. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.
