

**Fantasy™ Red Riding Hood
Anemone*****Anemone 'Red Riding Hood'***

Plant Height: 12 inches

Flower Height: 18 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ☉ ☐

Hardiness Zone: 5a

Other Names: Japanese Anemone, Windflower

Group/Class: Fantasy Series

Description:

A lovely, compact selection for the summer garden; branching stems covered with bright, scarlet red to pink blooms that are great for cutting; good for partial shade areas; mulch in colder winter areas; prefers afternoon shade in hot dry areas

Ornamental Features

Fantasy Red Riding Hood Anemone has masses of beautiful lightly-scented scarlet buttercup flowers with pink overtones and gold eyes at the ends of the stems from mid summer to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its serrated lobed leaves remain bluish-green in colour throughout the season.

Landscape Attributes

Fantasy Red Riding Hood Anemone is a dense herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Fantasy Red Riding Hood Anemone is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Fantasy Red Riding Hood Anemone will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
