Description:

Eye catching blush-pink to white flowers with crimson centers, rise above mounds of fine foliage; great for flower arrangements; deadhead to rebloom; very floriferous with a tidy, uniform habit; sturdy, resilient and easy to grow.

Ornamental Features

Pretty Poppers Kiss And Tell Pinks is blanketed in stunning lightly-scented semi-double shell pink frilly flowers with crimson eyes at the ends of the stems from late spring to late summer. The flowers are excellent for cutting. Its attractive grassy leaves remain bluish-green in colour with hints of silvery blue throughout the year.

Landscape Attributes

Pretty Poppers Kiss And Tell Pinks is an herbaceous evergreen perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Pretty Poppers Kiss And Tell Pinks is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use

Planting & Growing

Pretty Poppers Kiss And Tell Pinks will grow to be about 8 inches tall at maturity, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
