

**Golden Opportunity™ Rose**  
*Rosa 'WEKausujucton'*

Height: 10 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 6a

Group/Class: Climbing Rose

**Description:**

This vigorous climbing rose produces gorgeous golden yellow flowers that bloom in flushes throughout the season; a backdrop of glossy, deep green leaves with excellent disease resistance provides contrast to the vivid blooms

**Ornamental Features**

Golden Opportunity Rose features showy fragrant double gold flowers with yellow overtones along the branches from late spring to mid fall, which emerge from distinctive orange flower buds. The flowers are excellent for cutting. It has dark green deciduous foliage which emerges dark red in spring. The glossy oval compound leaves do not develop any appreciable fall colour.

**Landscape Attributes**

Golden Opportunity Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance woody vine that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Golden Opportunity Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Golden Opportunity Rose will grow to be about 10 feet tall at maturity, with a spread of 8 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This woody vine should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
